HOW TO DETERMINE WHAT TO CHARGE FOR PLAYING DESIGNER BAG BINGO

1. The cost of admission to play includes at least 1 face on each game card. A face is the actual bingo pattern where the numbers are printed to be matched when called. After the charge of admission, the cost of additional faces on the game card cost up $1.00 per face.

2. How many games?
   Normally 8 to 10

3. How many faces on each game sheet?
   Each game normally has four faces. This gives the person four chances to win at the Game.

4. Each game card is usually a different color. All can be the same or some can have a pattern that must be matched.

5. How do I determine the final cost to play Bingo?

   Example: If you play 8 games on every card, the first face is paid for with the price of the admission. So, if there are 8 games then the first 8 faces are paid for with the admission, i.e. $1.00 or $5.00 admission.

   You charge $5.00 for admission, and if you have four faces on each game card, then each card contains 3 extra faces (chances to win) and you can charge up to a $1.00 per face. Where there are 8 games then there would be an additional 3 x 8 faces equal to 24 faces. The 24 faces (chances to win) would cost $24.00. The total cost to play all 8 games and 32 faces would then be:

   Admission of $5.00 for one face on each of the 8 games $5.00

   Cost for each additional face $1.00, and there are 3 additional faces on each game for 3 faces on 8 games or 24 faces at $1.00 each $24.00
